

ILRS priority list procedures

- Priority list updated by ILRS CB and posted on ILRS website
- Priorities decrease with:
 - increasing orbital altitude; and
 - increasing orbital inclination (at a given altitude)
- Priority of some satellites may then be increased to intensify support for:
 - active missions (such as altimetry)
 - special campaigns (such as LARGE)
 - post-launch intensive tracking phases
- Reordering of priorities may be performed in order to assign higher priority missions with increased importance for the analysis community

- Does your station follow these priorities
- Do you try to cover the whole list or do you focus on a shorter list?
- What other requirements does your station try to satisfy/
